

Revolutionary Drywall Setting Compound Additive

About: Years of testing resulted in a proprietary formula that can be added to **ALL existing drywall products** sold today. Muddskip™ transforms existing drywall mud to perform like a lightweight plaster finish that anyone can apply easily in one day, ready for paint the following day with **NO SANDING!** Whether you are looking for a level 5 smooth finish, a textured finish like drag, knock down, skip trowel, stipple, or a simple orange peel. Muddskip™ offers **ease of use** to obtain your desired look in **half the labor time** traditional products would take to produce desired finish.

This product can be **ROLLED onto walls** with a standard paint roller (1" nap recommended) allows for extreme **ease of use**. IF you are a pro you can use the traditional hawk and trowel or pan and knife application methods. Muddskip™ saves up to 50% labor time depending on skill level, condition of substrate being coated and relative humidity as it relates to dry time. **ONE PRODUCT DOES IT ALL!**

Product: Muddskip™ is a **product additive** you add to **ANY existing dry or premix drywall compounds** transforming them into a one day process wall finish that **saves exponential time, money and labor**. Muddskip™ is changing the process of wall finishing as we know it today by allowing you to apply over several existing surfaces in most cases without a bonder. Obtaining the desired finish you choose, whether that be up to a level 5 smooth, skip trowel, texture, knock down, stipple, orange peel or a modification of your own. **Never before has there been a product that allows you to layer wet on wet without extensive dry time and no sanding mess.**

As easy as 1-2-3 Mix - Tape, bed and smooth seams, Apply Base Coat - Apply Finish Coat. Get a level 5 smooth coat finish or your desired texture in **ONE DAY** or obtain the finish of your desired texture with **NO Sanding mess!** Muddskip™ is so easy to use with any drywall setting compound on the market today. Muddskip™ may also be used as a patching compound or leveler for uneven substrates, this will require a longer dry time as coating is typically applied much thicker for repairs.

STRONGER BOND - HARDER FINISH - SAVES TIME - SAVES MONEY - BETTER FIRE RETARDANCY - IMPROVES PAINTING COVERAGE - ALL IN ONE PRODUCT
