

# Muddskip™

## Revolutionary Drywall Setting Compound Additive

**About:** Years of testing resulted in a proprietary formula that can be added to **ALL existing drywall products** sold today 1 bag of Muddskip Additive to 1 bag, bucket or box of Joint Compound. Muddskip transforms existing drywall mud to perform like a lightweight plaster finish that anyone can apply easily in one day, ready for paint the following day with **NO SANDING!** Whether you are looking for a Venetian smooth, level 5 smooth finish, a textured finish like drag, knock down, skip trowel, stipple, or a simple orange peel. Muddskip offers **ease of use** to obtain your desired look in **less time** traditional products would take to produce desired finish.

This product can be **ROLLED onto walls** with a standard paint roller (1/2"-1" nap recommended or a Texture roller if you want a heavy coat) allows for extreme **ease of use**. IF you are a pro you can use the traditional hawk and trowel or pan and knife application methods. Muddskip saves up to 50% of time on job, fewer trips to jobsite. Muddskip's bonding technology enables wet on wet coats (when dry to touch) for multiple coats in a day (unlike typical joint compound that will drag and peel). The **ReHydration Capacity** of Muddskip with water mist enables easy retooling of the Mudd up to 24 hours from application for perfecting the finish with **NO SANDING!**

**Product:** Muddskip is a **product additive** you add to **ANY existing dry or premix drywall compound** transforming them into a one day process wall finish that **saves exponential time, money and labor**. Muddskip is changing the process of wall finishing as we know it today by allowing you to apply over raw drywall and many existing surfaces without a bonder. Obtaining the desired finish you choose, whether that be up to a level 5 smooth, skip trowel, texture, knock down, stipple, orange peel or a modification of your own. **Never before has there been a product that allows you to layer wet on wet (dry to touch) without extensive dry time and no sanding mess.**

As easy as 1-2-3 Mix - Tape, bed, feather smooth seams, finish coat! For added strength or a **Venetian or Plaster look**, smoother and harder finish use Muddskip Finisher/Conditioner while mixing your Joint Compound (8 oz concentrate added while mixing). We then recommend using the Finisher while smoothing the wall 8oz to 32oz cold water in a misting spray bottle (pressurized for lightest mist) Polish the wall to desired level of smooth using your trowel or smoothing blade.

**Muddskip's** innovative Technology is a **GAME CHANGER**, **DISRUPTING** the way walls are finished today. **ONE PRODUCT FOR ALL NEEDS** from seams to Desired Finish in a fraction of the time traditional drywall finishing takes, healthier for applicators, cleaner work space, better quality finish. **Mitigates SHRINK, CRACKS, PEELING, POKING, while Stronger & Harder!**

**Better Bond, Higher Tensile Strength, Easier to Work With, Less Mess, Less Labor**
